Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/925,788

Applicant(s)

BROWN ET AL.

Examiner

John Kreck

Art Unit

3673

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 March 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22,25-29,31-35 and 37-39 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22,25-29,31-35 and 37-39 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/19/04 has been entered.
2. The drawings were received on 3/31/04. These drawings are approved.
3. Claims 1-22, 25-29, 31-35, 37-39 are pending.

Claim Rejections - 35 USC § 102 and 103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 37 and 38 are rejected under 35 U.S.C. 102(b) as being Anticipated by Durup, et al. (U.S. Patent number 5,988,760).

Durup shows an apparatus for solution mining including an injection tube (22) which has an inner diameter of sufficient size to allow for injection of fluid; and a production casing (14) which has an inner diameter sufficient to allow for production of a mixture between the outer surface of the injection tube and the inner surface of the casing as called for in claim 37. It is readily apparent that the Durup apparatus could be used in a single cavity

Durup also shows a production tube (see col. 5, lines 51-57) as called for in claim 38.

2. Claims 1, 3-6, 8-10, 13, 19, 21, 25-28, and 35 are rejected under 35 U.S.C. 103(a) as obvious over Huff (U.S. Patent number 4,425,003).

Huff teaches a method for solution mining a subterranean material including injecting a fluid (col. 2, line 40) into an elbow well (see col. 1, line 63 through col. 2, line 4), the fluid forming a mixture with the subterranean material in a cavity; and collecting the mixture from the elbow well (col. 2, line 52). Huff does not explicitly teach an elbow well having a single cavity. It is well established in patent law that the omission of an element (in this case the second cavity) and its function is obvious if the function of the element is not desired. Thus it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Huff process to have included an elbow well with only a single cavity as called for in claim 1; for example, to solution mine a small deposit.

Art Unit: 3673

See, for example, *In re Larson*, 340 F.2d 965, 144 USPQ 347 (CCPA 1965) (Omission of additional framework and axle which served to increase the cargo carrying capacity of prior art mobile fluid carrying unit would have been obvious if this feature was not desired.)

Huff also teaches the making the elbow well as called for in claim 3.

Huff also teaches the drilling the elbow well into a bed as called for in claim 4.

Huff also teaches the casing the elbow well as called for in claim 5.

Huff also teaches the injecting into an injection tube (16) as called for in claim 6.

Huff also teaches the making the cavity comprises the mixture as called for in claim 8.

Huff also teaches the mixture comprises a solution as called for in claim 9.

Huff also teaches the water as called for in claim 10.

Huff also teaches the collecting the mixture through a production tube (17) as called for in claim 13.

Regarding claim 19: Huff fails to disclose any operating pressure; and thus fails to explicitly teach the ambient pressure. Since Huff fails to disclose any specific pressure and fails to teach any pressurizing, then it is assumed that Huff anticipates "ambient" pressure as called for in claim 19; alternatively, if it is deemed that Huff does not anticipated the ambient pressure, then it would have been obvious to one of ordinary skill in the art at the time of the invention to have operated the Huff method at ambient pressure as called for in claim 19, in order to eliminate any need for high pressure equipment.

Regarding independent claim 21:

Huff shows a system for solution mining including means for injection fluid into an elbow well, the fluid forming a mixture with subterranean material in a cavity and means for collecting the mixture. Huff does not explicitly teach an elbow well having a single cavity. It is well established in patent law that the omission of an element (in this case the second cavity) and its function is obvious if the function of the element is not desired. Thus it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Huff system to have included an elbow well with only a single cavity as called for in claim 21; for example, to solution mine a small deposit.

Huff also teaches the means for casing (15) as called for in claim 25.

Huff also teaches the injection tube as called for in claim 26.

Huff also teaches the subterranean solution as called for in claim 27.

Huff also teaches the water as called for in claim 28.

Regarding claim 35: Huff fails to disclose any operating pressure; and thus fails to explicitly teach the ambient pressure. Since Huff fails to disclose any specific pressure and fails to teach any pressurizing, then it is assumed that Huff anticipates "ambient" pressure as called for in claim 35; alternatively, if it is deemed that Huff does not anticipated the ambient pressure, then it would have been obvious to one of ordinary skill in the art at the time of the invention to have operated the Huff method at ambient pressure as called for in claim 35, in order to eliminate any need for high pressure equipment.

3. Claims 1, 3-6, 8-10, 13, 21, 25-28 are rejected under 35 U.S.C. 102(b) as being anticipated by or, in the alternative, under 35 U.S.C. 103 as obvious over Durup, et al. (U.S. Patent number 5,988,760).

Durup teaches a method for solution mining a subterranean material including injecting a fluid into an elbow well the fluid forming a mixture with the subterranean material in a single cavity; and collecting the mixture from the elbow well as called for in claim 1. Durup shows, at 20a, a single cavity (see figure 6). It is the examiner's position that the single cavity, which is formed in the process of Durup (prior to forming the other cavities 20b, 20c, etc) anticipates the elbow well within a single cavity as called for in claim 1. If it is deemed that the Durup reference does not anticipate a single cavity within the scope of the claimed invention, then it would have been obvious to one of ordinary skill in the art at the time of the invention to have practiced the Durup process with only a single cavity, for example, to solution mine a small deposit. It is well established in patent law that the omission of an element (in this case the second cavity) and its function is obvious if the function of the element is not desired.

Durup also teaches the making the elbow well as called for in claim 3.

Durup also teaches the drilling the elbow well into a bed as called for in claim 4.

Durup also teaches the casing (14) the elbow well as called for in claim 5.

Durup also teaches the injecting into a tube (22) as called for in claim 6.

Durup also teaches the making the cavity comprises the mixture as called for in claim 8.

Durup also teaches the mixture comprises a solution as called for in claim 9.

Durup also teaches the water as called for in claim 10.

Durup also teaches the collecting the mixture through a production tube (see col. 5, lines 51-57) as called for in claim 13.

Regarding independent claim 21:

Durup shows a system for solution mining including means for injection fluid into an elbow well, the fluid forming a mixture with subterranean material in a single cavity and means for collecting the mixture as called for in claim 21. It is the examiner's position that the single cavity, which is formed in the process of Durup (prior to forming the other cavities 20b, 20c, etc) anticipates the elbow well within a single cavity as called for in claim 1. If it is deemed that the Durup reference does not anticipate a single cavity within the scope of the claimed invention, then it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Durup system to have only a single cavity, for example, to solution mine a small deposit. It is well established in patent law that the omission of an element (in this case the second cavity) and its function is obvious if the function of the element is not desired.

Durup also teaches the means for casing (14) as called for in claim 25.

Durup also teaches the injection tube as called for in claim 26.

Durup also teaches the subterranean solution as called for in claim 27.

Durup also teaches the water as called for in claim 28.

4. Claims 2, 11, 20, 22, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huff in view of Kube (U.S. Patent number 3,953,073).

Huff fails to teach the trona as called for in claims 2 and 22; the caustic as called for in claims 11 and 29; or the step of processing as called for in claims 20. Huff teaches that the method can be used with "any other soluble mineral" (col. 1, line 51).

Kube teaches that trona is a soluble mineral, and is desirably mined to recover valuable products, such as sodium carbonate; and that a caustic solution is advantageous for solution mining trona (col. 2, lines 41-58) because it improves the solubility of the carbonate/bicarbonate system. Kube further teaches that processing is desirable subsequent to mining (col. 3, line 20) to extract sodium carbonate.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have practiced the Huff method to solution mine trona; thus having the subterranean material comprising trona as called for in claims 2 and 22; in order to obtain the valuable product of sodium carbonate.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have practiced the Huff method to solution mine trona, and to have further modified the Huff method/apparatus to also include the fluid comprising a caustic mixture as called for in claims 11 and 29, and as taught by Kube, in order to improve the solubility.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have practiced the Huff method to solution mine trona, and to have further modified the Huff method to also include the step of processing as called for in claim 20, and as taught by Kube, in order to extract the valuable sodium carbonate from the solution.

5. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Huff in view of Brinton (U.S. Patent number 2,822,158).

Huff fails to teach the heating of fluid.

Brinton teaches that it is sometimes desirable to heat fluid for solution mining, based on the material to be mined (col. 14, lines 72-73).

It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Huff method to have included the step of heating the fluid as called for in claim 12; based on the material to be mined

6. Claims 14-18 and 31-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huff in view of Larson, et al. (U.S. Patent number 4,222,611).

Huff fails to explicitly teach the pumping/means for pumping as called for in claims 14 and 31; the pump lifting through the tube as called for in claim 15; the pump in the elbow well as called for in claim 18; and the means for placing the pump as called for in claim 32.

It is notoriously conventional in the art of solution mining to use pumps to pump fluid to the surface; this is shown by Larson (col. 2, lines 2-6). Larson shows a pump within a well, and thus inherently teaches the means for placing a pump in a well; pumps are often placed within wells because pumps operate more efficiently with short suction lengths.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Huff method to have included pumping the mixture as called for in claim 14 or to have the means for pumping as called for in claim 31, in order to help deliver the mixture to the surface.

With regards to claim 15, Larson teaches that the pump lifts the fluid through the production tube; thus it would have been further obvious to one of ordinary skill in the art at the time of the invention to have modified the Huff method to have a pump lift fluid through the production tube as called for in claim 15, in order to help deliver the mixture to the surface.

With regards to claims 16 and 17; Huff teaches the delivering to a collection location at the surface.

With regards to claim 18, Larson teaches that the pump is located in the well, thus it would have been further obvious to one of ordinary skill in the art at the time of the invention to have modified the Huff method to have placed a pump in the elbow well as called for in claim 18, in order to help deliver the mixture to the surface.

With regards to claim 32, Larson teaches that the pump is located in the well, thus it would have been further obvious to one of ordinary skill in the art at the time of

Art Unit: 3673

the invention to have modified the Huff method to have included means for placing a pump in the elbow well as called for in claim 32, in order to help deliver the mixture to the surface.

With regards to claims 33 and 34; Huff teaches the delivering to a collection location at the surface.

7. Claim 39 is rejected under 35 U.S.C. 103(a) as being unpatentable over Durup in view of Larson.

Durup fails to explicitly teach the pump as called for in claim 39.

It is notoriously conventional in the art of solution mining to use pumps to pump fluid to the surface; this is shown by Larson (col. 2, lines 2-6).

It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Durup system to have included a pump connected to the production tube, in order to help deliver the mixture to the surface.

Response to Arguments

8. Applicant's arguments with respect to the 102 rejection based on Huff have been considered but are moot in view of the new ground(s) of rejection.

9. Applicant's further arguments filed 2/19/04 and 3/31/04 have been fully considered but they are not persuasive.

Applicant has argued that Durup fails to teach an elbow well with a single cavity. As expressed above, Durup shows a single cavity at 20a (e.g. figure 6). Although

Durup explicitly teaches that this cavity is formed as part of the process of forming multiple cavities; it cannot be denied that (at some point in the process) it is a single cavity.

With specific regards to claims 37-39: the limitations of "for solution mining a subterranean material in an elbow well having a single cavity" in the preamble is given weight as intended use only. It is clear that the apparatus of Durup is capable of being used in a single cavity.

Applicant has argued that the Durup and Huff references "teach away" from the claimed invention. Applicant is invited to point out specific text within the references which teach away from a single cavity. The fact that the references may teach something different from the claimed invention does not mean that they "teach away".

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Kreck whose telephone number is (703)308-2725. The examiner can normally be reached on M-F 5:30 am - 2:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Shackelford can be reached on (703)308-2978. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 3673

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
